

Component Ordering Information

Hiltek Manual Hilmaster System

TS2

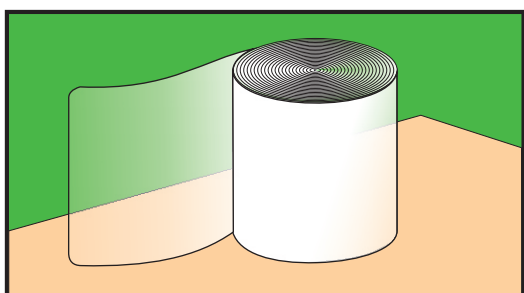

Listed below are the components you will need for your numberplate manufacturing system. They are as follows:

Wet (Adhesive) Substrate **Dry (Non-Adhesive) Optical Film** **Hilmaster Transfers**

Wet (Adhesive) Substrate

Hard, white or yellow substrate supplied with the reflective already adhered. This has a peel off film, which reveals the adhesive part of the substrate. This can also be supplied with the Euro GB flag. They are supplied in pack quantities of 25. Various sizes available.

Dry (Non-Adhesive) Optical Film

This is supplied in rolls of 25's, 50's, 100's, 200's or in flat-packed quantities of 25. The film is visibly clear and can be supplied plain or printed with you or your customer's logo. It can also be supplied for the Euro GB format, or printed with a National flag on request. Various sizes available.

Hilmaster Transfers

This product is for use with the above materials. All Hilmaster transfers are mirror image and are adhesive faced and are applied to the optical film in reverse. They are supplied in pack quantities of 50 per letter or number.
